

"Royal Purple"

Stands for All That is Best in the Following:

Laying Meal:—Will convert your hens into laying machines.

Calf Meal:—will raise calves after 8 days old without a drop of milk if necessary.

Chick Feed:—Produces the strongest chicks and eliminates loss.

Stock Specific:—Essential for the care of all stock. It is an animal conditioner.

Poultry Specific:—Keeps poultry healthy.

Roup Cure:—Prevents and cures Roup

Lice Killer:—Positively guaranteed to kill.

Disinfectant or Sheep Dip:—The best and surest.

Worm Powder, Cough Cure, Gall Cure, Colic Cure, and Sweat Linament.

We are agents for the district for the above Royal Purple line and have local testimonials of their worth.

OF LOCAL INTEREST

Readers are requested to send in items for this column not later than 12 o'clock Monday noon preceding day of publication. All local news items are welcomed by the Standard. Phone 17 or 68.

Mr. and Mrs. W. F. Anderson, of Stanton, are visiting in Strathmore.

Mrs. Sharran, Ardenode, is at present on a month's holiday in B.C.

Mr. and Mrs. J. H. Goshard are the proud parents of a ten pound baby boy, born on January 31st.

Mr. and Mrs. Harold Bell left on Wednesday on a month's visit to the Coast.

Strathmore G.W.V.A. are holding a Valentine Party, whist drive and dance, in the Opera House on February 11th.

The weather of the past week has been somewhat nippy, but the same weather this time last year would have been considered warm.

A seven and a half pound baby boy was born to Mr. and Mrs. L. O. Frieser at Strathmore Hospital last week. Both mother and child are doing well.

The population was also swollen a week ago on Saturday by the birth of a daughter to Mr. and Mrs. Harries. Mother and child are both doing well.

Big Concert and Dance at Serviceberry School House on Friday, February 11th, voluntary offerings, according to local talent. Admission \$1.00.

Mention of a wreath contributed by Mrs. W. McLagan at the funeral of the late Mr. Chase. Wade was inadvertently omitted in the report of the funeral published in last issue.

Mr. Geo. Wade, formerly ditch rider here, is paying a visit to Strathmore after an absence of five years. He is pleased to see the progress made in the district during that interval. Mr. and Mrs. Wade are residing with Mr. T. H. Rives during their visit here.

A fire in the McLaughlin Garage (Gleichen), completely destroyed the building, also eight cars. The loss is estimated at between \$15,000 and \$20,000. Mr. Farquharson, the owner who is a disabled veteran, had just recently taken over, and he has positively lost everything, including a quantity of household furniture.

The Hockey Club are holding a dance in the King Edward Hall on the evening of February 10. Mrs. Train's orchestra will be in attendance. At 7:30 the same evening a game will be held between Strathmore and Nightingale. Nightingale has a good going team, and defeated Rockford last Friday. The game will be well worth seeing, and we look for a good attendance.

The incumbent and Baroness of St. Michaels and All Angels' Church, sincerely regret that the music to be worshiped by our Father was, however, only omitted from the report published last week. It is the intention of the church to have a special service for the purpose of speaking to the people of the church.

A special confirmation service was held in St. Michaels' Church on Sunday morning, being conducted by the former President of Canada. The service was held in the church, and was a very successful one. There was a large congregation, and the church being occupied by Bishop Pridmore, in remarks read prior to the ceremony, congratulated the church on the improvements made during the past year, and thanked the Ladies Guild for their good work.

Mr. M. E. Sly criticizes the policy of the U.F.A. strenuously in a letter to the Albertan. He alleges that it is dominated too much by the policy of caution. The history of Strathmore U.F.A. shows instances where caution might have been an advisable policy, and some local farmers can look back far enough to the time when the officers of the U.F.A. the Strathmore Co-operative Trading Coy. kept their heads down and looked afterwards, with disastrous results to both principal and dividends.

Since having Strathmore on December 13th, Mrs. P. M. Dwyer and Mrs. Pritchard have been making an extended tour of the States, and have now arrived at Rock Island, Ill. Apparently they have had a very enjoyable time and have seen everything.

North seeing Europe. The only fly in the ointment was that which, alas, Dwyer reached Rock Island the day following two copies of the Standard awaiting her, and she says she certainly wants to get the paper. After receiving Mrs. Dwyer's letter we mailed Hades with the "devil" and trust that it will have the effect that the paper gets to its destination, regularly. Mrs. Dwyer expects to be back in Sunny Alberta by spring. The following extract from Mrs. Dwyer's interesting letter will, be of much interest to her many local friends. Strathmore Standard.

Dear Sir: Mrs. Pritchard and I arrived here last night, we left Strathmore December 12th and have visited Vancouver, Victoria, and Seattle, Wash, Portland, Ore. Fresno, and Los Angeles. We stayed at each place until we took in every sight seeing trip from each point then we left for Salt Lake, Utah, and Denver. We stopped at these two places two weeks, and are now at Rock Island, Ill. Mrs. Pritchard's home. We took in 1600 miles of sight seeing by auto and our railroad tickets over 7270 miles besides the value of miles by street car. We are going to have our trip. Before I start for Alberta I expect to visit in Indiana and Eastern Ohio. My time is good for one month, but expect to be back in sunny Alberta before then.

DON'T
Don't let some fifth-tongued salesman take your order for any kind of printing by telling you that he can do the work cheaper and better for you than the local man. He can't. Not in Strathmore district any more, for the printing plant located in Strathmore is equipped with the machinery necessary to turn out any kind of printing, at the prices current through out Western Canada, and to do a first-class job.
Some merchants fall for the "travelers' tales." The usual result is that they get a job with one or two misprints in it, and get it several months after they have placed the order.
Your local plant exists to give you service, and to turn out your work when and how you want it. Printing is a manufacturing business, and is treated as such by the people of the whole district.
We sometimes don't get the time to go round and canvass for orders, but we can give you the benefit of that in the saving of the amount you ultimately have to pay the traveler for his talk with you.
REMEMBER—Dwyer class is Job Printing. Don't order with out asking our prices.

FORMER RUSSIAN PRINCESS ELNA'S LIVING AS "RAG DOLL MODELER" IN LONDON

It was CHRIS COLUMBUS When Professor Walter Raleigh was asked to lecture at Princeton College. Professor C. went down to the station to meet the distinguished visitor. Professor C. went down to the station. Raleigh, then, waiting up to a man whom he thought looked like him, he said:

"I beg your pardon, but am I a so-called Raleigh?"
The man looked at him for a moment, and, thinking he must be mistaken, replied:
"No, I am Christopher Columbus. Walter Raleigh is in the smoking room with Queen Elizabeth. London Times.

ALBERTA FARMERS HAVE GOOD YEAR

Alberta as a whole, and especially Central Alberta, is fortunate in that the favors of providence were freely extended in regard to farming operations in the past season, says the Edmonton Bulletin in an editorial review of the year 1929. The grain crops were abundant and feed for livestock was luxurious. Harvest weather was favorable, reducing cost of operations and maintaining quality of grain. The fall was favorable for ploughing and the winter so far has been extraordinary mild and pleasant. Succeeding a most unfavorable winter, the summer of 1929 was one of the best we ever had. Although farm operations have not been so profitable as they might have been this season owing to the drop in prices, the conditions have been no less favorable as to give every encouragement for the future, when costs of production and world markets again become normal. Market conditions are temporary. The losses of one season are recovered in the next. But conditions of production are permanent. With the rich soil and the favorable seasons the Central Alberta farmer can compete with the world.

"Fortunately land prices have not yet been boomed here as in some other parts of the continent," the Bulletin goes on to say. "The same drop in prices which affects Central Alberta where land is held from \$35 to \$100 an acre, affects the prairie states where land is held at from \$10 to \$50 an acre. Acre for acre, Central Alberta grows as large a tonnage of produce in wheat, oats, barley, potatoes and timothy, as the State of Iowa, for example. Rushed for bushel the quality is higher, and the crop is fully as certain. The farmer on \$50 an acre farm land are very much harder hit by the drop in grain and livestock prices than are the farmers on \$25, \$40 or \$100 an acre land in Central Alberta."

Already, it may be added, there are signs that the markets will be more favorable to farmers during the present year. The farmer was the first to feel his loss brought about by the readjustment to a lower level of prices, but he will be the first to recover, and this recovery will most quickly be noticed by that farmer who is able to produce large crops on land that has cost him less than fifty dollars an acre.

THE HORSE STILL THRIVES

Motor power has largely invaded the province of the horse, but the animal still lives and thrives and still has its widespread usefulness. The great war had its devastating impact on the horse and also developed the value of machinery in its place. But experience has proven that there are still many uses to which the horse can be better adapted than the motor or steam power. When tractors in the horse was to disappear, when the trolley was adapted to public service, a crippling blow was dealt the horse. When the bicycle became a fad, the horse became an object of scorn. When the automobile and later the tractor appeared the horse was to vanish, but he maintained his ground. His numbers are not decreasing to any notable extent while his quality has ever an upward trend. Breeding stations are being established and every effort is being made to maintain blood type. Saskatchewan's success in winning championships at the recent International Stock Show in Chicago is an evidence of the marked success that has been met with in Canada. But the West is not alone in the march of horse improvement and development. Then the French-Canadian horse there is probably no breed that is more hardy or agriculturally useful. The French-Canadian horse breeder's association has long been in affiliation for record purposes with the National Live Stock Record Board of Ottawa, and in the last two years that Association has turned over to the Dominion Department of Agriculture for twenty years a farm five hundred acres at St. Joachim, Que., to be mainly used for the breeding of its particular type of horse. There are at present 61 French-Canadian horses on the farm, all registered. Entries were made at some of the more prominent fall fairs in Quebec and a series of instances won. The December number of the first prizes and championships were Agricultural Gazette of Canada give full details of the work that is being done at the recently acquired French-Canadian horse breeding farm.

INVENTION OF FORMER STRATHMORE MAN.

Improves Milking Machine.

A decided improvement on the form of style of pulsator in milking machine has just been perfected by Mr. Robert Maes, employed till spring as treasury operator at the C.P.R. demonstration farm at Strathmore. Mr. Maes' invention is described at considerable length in an interview published in the "Calgary Herald," from which we quote the following: "On Friday a Herald representative was enabled to see one of Maes' contrivances early at work on the herd of John Shepherd, on his farm near Calgary. To clearly explain how a pulsator works and how Mr. Maes has improved on the old style, a short description of the machine will be necessary."

It is operated first of all by a gasoline engine of two and a half horsepower, maintaining a vacuum in a small tank, which also maintains the same in pipes which run through the barn to the head of each stall. A rubber tubing, attached to the machine as it sits in the stall between the animals. The old style pulsator sits on top of the cans and valves are attached from this to the four brass tubes, lined with rubber, which fit to each cow. The vacuum created, the pulsator starts to work and the human squeezing motion is thus attained. The cows are milked rapidly and thoroughly, and the improvement of "Stand still, then Blossom," with an occasional punch in the ribs when the tail becomes too demonstrative.

Here is where Maes' invention makes the improvement. Every cow needs individual attention, and this is much easier than others, and some harder. It is provided for in the Maes' pulsator in the fact that instead of this being on the top of the can it is attached beneath each cow, and by the use of a small tap the pulsator can be adjusted to the needs of the particular cow. If a cow needs a long, strong stroke and a short suction, a turn of the tap does the trick. Another turn and you have a short stroke and a long suction. In a word the cow gets practically the individual attention it would get from the hands of an intelligent dairymaid.

Moreover the new pulsator does away with one of the suction tubes in each cow, and this also reduces the power required from the engine. Mr. Maes figures the saving is about 50 per cent.

The pulsator is of simple construction, and is fool proof. If the cow breaks loose from it and tramps on it, there is nothing to be broken. The action inside is a perfectly natural suction, exactly like the human hand. It milks rapidly and easily, and when the Herald representative saw it at work on Friday night it was pulling away at a great rate, adjusted to one speed on one cow and to another on the next.

There is a simple piston inside, connected with two ports, and a small coil spring opens and shuts the valve as it goes, thus creating the suction. The tap controls the two ports opening or closing as required.

Mr. Maes has been working on this invention for the past nine years. He pays a great tribute to the work done for him on the mechanical end by Ed. Ghehan, of Calgary, an intelligent mechanic who has done much to bring the little machine to perfection.

CARSLAND NOTES

A very successful box social was held in the Church Hall on Thursday evening, under the auspices of the Ladies of the P.B. Club, in aid of the proposed new Community Hall. The musical part of the programme was well rendered and much enjoyed by the appreciative audience. The boxes were numerous and beautifully decorated. One made to represent an aeroplane, and one made in the shape of a quarter moon, came in for special mention. Mr. McInnes had an excellent entertainment, and the sum of \$125 was realized from the sale of boxes.

The Rev. Mr. Cook acted as chairman. Mr. Porter, of Ponikvar, B.C., is visiting his daughter Mrs. E. E. Paig.

Mr. D. A. Anderson is on a visit to the Eastern States.

Mr. and Mrs. F. A. Crothers are spending the winter in town. Carlsland F.A. held a very interesting meeting on Saturday, January 26th, in the church hall. A large number were present, and a very interesting discussion took place on matters taken up at the F.A. Convention at Edmonton. Interest was particularly directed to the proposed well pool. The delegates to the convention were well posted, and were

able to answer the queries directed at them and give an authentic report of the Convention. The delegates were Messrs C. A. Phillips, J. Olson, and T. H. Kraus.

The next meeting of the Carlsland F.A. will be held on Saturday, February 12, at 2 p.m. in the Church Hall.

Miss Mary Taylor, of Strathmore, is now in charge of the new drug store here.

Our genial bank manager, when returning home the other night, had his windshield broken by a large jackrabbit. This came as the conclusion of a five hour trip from Strathmore to Carlsland, caused by a frozen radiator. As Mrs. Coyle was in the car with him, also Harry Wood, the story may be accepted as absolutely authentic, otherwise we might have thought, etc., etc.

CHANCELLOR NOTES.

The Chancellor branch of the G.W.V.A. intend holding a reunion dinner in the Memorial Hall, Chancellor, on Thursday February 10th. All returned soldiers will be welcome. If any of them play any instrument, sing or recite, bring their accomplishments with them. This is the first affair of this kind that the Chancellor branch have ventured and we wish to make it a success. We are trying to get Comrade Russell, the zone representative, to be present.

On Friday February 25th a Whist and Concert will be held in the Memorial Hall under the auspices of the Chancellor branch of the G.W.V.A., at which all returned soldiers and friends will be welcome.

A BUSINESS LESSON From Nova Scotia.

Out in Alberta we sometimes look upon Nova Scotia as being in the effete East, but there are some live wires there all the same. There are many merchants and business men here who can learn something from a Nova Scotian experience. Mr. Weaver is a Kentville merchant, who started in business ten years ago with \$245, and has now one of the best country businesses in Nova Scotia. Hear what he has to say about advertising.

"The newspapers get my money for just one purpose, and that is to bring business to my store. I am not impressed with the argument that it is any merchant's duty to support the local newspaper. If I believe this to be true I think I would make the publisher a direct contribution and let it go at that. I prefer to consider the local newspaper as a business institution, able to render me a distinct service in a business-like way. The which I should pay what such service is worth, rather than look upon the publisher as an object of charity and myself as a Lent Benefactor. In any case, I do not donate my money to the Kentville papers. I spend money with them week after week, but it pays me to do so, and I would not do it otherwise."

"While my advertising pays me, I do not give the newspaper all the credit for that fact, and if my advertising did not pay

LOST, \$100.00

It is probable that you lost that amount or over on some branch of your farm operations last year. Wouldn't you like to know just where the "leak" was and how you could stop it?

Scott's Simplified Accounting System for Farmers tells you at a glance just where your money is going and on what branches you lost money.

It divides up farm operations in a practical manner and shows you month by month for a five year period just where you stand on every branch of work.

The system was compiled by a practical banker and is so simple that any farmer who can read and write can keep accurate accounts. The System provides a detailed annual statement which will be accepted by any bank when you require banking accommodation. The only system with which is given a Systematized Pocket Note Book, and which simplifies your Income Tax Returns.

Endorsed by the Ministers of Agriculture, Officials of Farm Organizations and prominent bankers.

Scott's System May Be Obtained From JOHN MACKENZIE, Strathmore, Alta.

Every business man can get results from his advertising if he puts his mind to it, the same as Mr. Weaver has done. We have the equipment and the circulation that will enable you to get results if you use your space properly and we will give you all the co-operation possible in framing your ads. There is no reason why you should not keep the local business in the local stores instead of letting the cash go largely into the mail order houses. The average customer would rather buy at home, but many mail order houses get a lot of business because their catalogue ads are plausible and attractive.

Mail order houses would like to advertise in the Strathmore Standard, and pay bigger rates than we are asking the local advertisers now, but we have refused their business up-to-date, because we do not believe the best interests of the community are served by centralized buying.

Strathmore and Bow Valley STANDARD

John Mackenzie, Proprietor.

Canada's Buffalo Herd is Now the Largest On the Continent

In a general way it is known that the Dominion of Canada purchased the Michipicou herd of the Platte River reservation some years ago, and used it as a basis for the Canadian buffalo herd at Wainwright, Alberta, says the Saturday Evening Post. That herd is the largest and best on the North American Continent.

It lives practically on open range and comprises this year forty-three hundred and thirty-five head. It is the only herd of its kind in the world.

It is also the only herd of its kind in the world. It is the only herd of its kind in the world. It is the only herd of its kind in the world.

of the American blood. In Australia, another far-off outpost of the crown of Great Britain, three specimens have been imported.

The nobility of Europe, especially of Great Britain, have done much for this species. The herd of the Duke of Portland has forty-eight individuals today, and in London there are still three specimens left alive. Belgium owns one bull, Germany two head of buffalo, Holland seven head. That is all for Europe of our species, the American Bison. In Uruguay, South America, there are two head. The total footing for the world's census makes it five hundred and ninety-two buffalo alive in North America and seventy-three in Europe and Asia.

The total for the world is eighty-five hundred and thirty-five head, and thirty-three hundred calves born last year.

Alberta's Forest Fires

During Past Season Suffered Rather Lightly.

Statistics compiled at the office of the forestry branch show that Alberta suffered rather lightly through forest fires during the past season. The situation may be summarized as follows: There were reported 421 fires; the expenditure for fighting them was \$7,000; and the estimated loss was approximately \$60,000. This does not include forest fires occurring in Dominion parks. Of the 421 fires, 231 were caused by railways, 62 by campers, 58 by settlers, and 69 by various miscellaneous agencies such as lightning, smokers, candles, etc. In case of 29 of these fires it was impossible to determine the cost.

It is interesting to note that only 231 were reported during the summer of 1919. In the 253 fires in 1919, 225 were caused by railways and 15 by campers. The figures show a rather alarming increase in the number of fires started by campers and those people who make use of the forest reserves for camping and fishing trips are currently warned to exercise every caution to prevent the escape of fire. Over half of the damage this year and almost half of the damage last year was caused by one spreading camp fire.

Population of B.C.

British Columbia Is Now Claiming 555,356 Inhabitants.

British Columbia's population is 555,356, according to Dr. Hagen Young, secretary of the Provincial Board of Health, who has made public his report for 1920. This estimate includes 25,649 Indians. The total population is an increase of 89,700 or a little more than 20 per cent. over the preceding year.

The death rate for the whole province last year was 9.22, which is less than half the birth rate, which was 19.56. The total births for the year was 10,002 and the number of deaths 4,420. Marriages numbered 4,620, an increase over the previous year of 1,821. In 1919 there were 6,096 deaths, but largely in the infantile period, while the birth rate was 15.38 per 1,000 of population, in that year.

Irrigating A Million Acres

Situated That Federal Government May Undertake Huge Scheme.

It is to irrigate a million acres of land in Central Alberta and Saskatchewan will probably be undertaken by the Dominion Government during the 1921-22 season. The scheme is to irrigate a million acres of land in Central Alberta and Saskatchewan will probably be undertaken by the Dominion Government during the 1921-22 season. The scheme is to irrigate a million acres of land in Central Alberta and Saskatchewan will probably be undertaken by the Dominion Government during the 1921-22 season.

To Harness The Tides

Huge Scheme Projected in England That May Run Power Greater Than Niagara.

The British Ministry of Transport has just made public a scheme to harness the tidal waters of the River Severn at a cost of £3,000,000 and to erect a power plant greater than that of Niagara Falls. The Severn discharges 100,000,000 gallons of water into the English Channel from London.

The project is an outcome of the efforts of Sir Alexander Gibb, chief engineer of ports construction in the British army during the war and holder of the great naval dockyard at Rosyth. It is calculated that the power plant could produce 1,000,000 horsepower, at its peak load capacity, and that it would cost £3,000,000 to build, or £300,000 a year.

It is claimed that it would revolutionize the whole industry of the west of England, and would be a London with cheap electric current.

A concrete dam would be built across the river, creating a locked basin. 72 square miles of water into which vessels could pass through a channel. It is estimated that the undertaking would provide work for 25,000 men for seven years.

In the spring tides the Severn rises 38 feet, the second highest tide in the Bay of Fundy. It is estimated that tidal waters have never yet been used for the generation of electricity on such a vast scale, coupled with the life estimated cost of the scheme.

In the Halls of Learning

DR. W. W. SWANSON.

Dr. W. W. Swanson, Professor of Economics in the University of Saskatchewan.

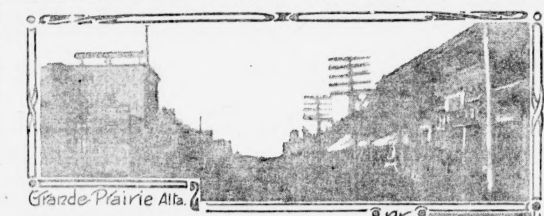

Dr. Swanson, who is a member of the faculty of the University of Saskatchewan, is a well-known economist and a leading authority on the subject of the Canadian economy. He has been a member of the faculty of the University of Saskatchewan since 1910.

Harmony.

Wife—How nice it would be if all things in this world would work in harmony!

Husband—Wouldn't it though? For instance, if coal would go up and down with the thermometer!

PIONEERS IN PEACE RIVER DISTRICT

One August morning ten years ago, a Dominion Cabinet Minister at Ottawa, interrupted for best part of a day the busy routine of his office to go to a sympathetic, traveling Englishman, his visitor of the day. He had just returned from a long tour right through the Peace River district, on the Mackenzie Basin to Fort McMurray.

"We have no wish," said he with emphasis, "to induce settlers to enter as yet the new Promised Land. This, remember, was in 1909. I speak of the future only. But I am satisfied that when the present frontier land is all disposed of, then this back country will be taken up, because it will pay people better to secure land there than to pay the price of the land that is asked for the other."

"Much work has to be done first," he continued. "Rivers have to be made navigable and the land has to be surveyed. My journey was made to ascertain if these undertakings would be justified. And my verdict is yes. Though this land lies north, it is not appreciably colder than the southern portions of the province. At Edmonton the climate is as favorable as at the international boundary, owing to the lower altitude, and for the same reason, together with other contributory conditions, a couple of hundred miles further up country makes little difference."

In 1914 came the railway going, and in 1916, when the war was done, it pressed the pioneers. This year I have been to the Peace River and back, and I have seen it with my own eyes. I am sure this is the best land in the world."

First, the country is of uncommonly large-scale, with patches of light bush, set among low purple hills, and intersected by belts of timber and low rivers and streams. Park-like is the descriptive term that springs to one's pen. Rose-bushes everywhere by millions, and great the alar trees, with their white, grace and glow. A thousand daintier grasses add soft undertones, as they ripple in the breeze. Rarely have I seen so much of the beauty of a country's future as when our automobile foundered along the ninety-mile stretch of the Peace River Crossing to Spirit River. The naked plains of the south have their charm—at least under summer skies; but here is a country where the eye is rested and the soul inspired, while still the pocket fills.

ALMIGHTY VOICE

Some New Sidelights on the History of This Famous Indian Outlaw.

By O-G-E-MAS-ES (Little Chief).

(Copyrighted)

Some twenty years ago, more or less, my scattered settlement was thrown into a great state of excitement by the shooting of a Northern Mounted Policeman by an Indian, about fourteen miles west of where Melfort now stands. This was the first mention of Almighty Voice, that famous outlaw, who kept this scene of Saskatchewan in an uproar for a couple of years. This young Indian was a Saskatchewan of the Duck Lake band, and voted for his swift running. He was imprisoned at Duck Lake by the Mounted, pending the trial of the supposed theft of a steer; broke jail that night, crossed the north branch of the Saskatchewan through driving ice, secured a pony, and single-handedly gunned some of his Indian friends and struck north towards Fort Chipewyan, accompanied by his friends.

The police were on his track next morning, and the sergeant (as Life Guardsmen) with a French half-breed interpreter, caught him up just about where the village of Bratty now stands. The Indian stopped his pony, got out, knelt down and holding up his right hand, called out, "Sisup, o I will shoot!" Bravely the old soldier rode the outlaw down, but a single shot struck him in the head.

Now, with an empty gun and a mortal blow to the head, the opportunity for Mr. Melfort to capture him. But he also turned back and told back as hard as he could get to his McKay (that famous scout) who was bringing up the rear with a buckboard, and was some twelve miles back at a settler's house, waiting for their return with his prisoner. If he had been alone, Mr. Almighty Voice's career would have ended right there, for the sergeant was greatly relieved by his capture.

The winter passed and small bands of police were constantly traversing the district, visiting Indian camps and settling down, but without success, though rumors were plentiful as to the whereabouts of the outlaw. It was not until the summer of 1901 that he was seen again, and he was seen in the Indian friends that he was innocent of the crime he was imprisoned for. His success in eluding the Mounted Police and also winning over one or two of the men in civilian search parties had made him a hero in the eyes of his countrymen, and there was no doubt he constantly received food, clothes and shelter from the Indian camps, for after all, even the Indian is a human being, and was more than willing to help him.

About a year after his escape, one of Kikisno's sons called at my house and told me of the outlaw's whereabouts. He said that he had seen him in the mountains of the Rockies, and that he was very much palmed and sold for good money. He said that he had seen him in the mountains of the Rockies, and that he was very much palmed and sold for good money. He said that he had seen him in the mountains of the Rockies, and that he was very much palmed and sold for good money.

He said that he had seen him in the mountains of the Rockies, and that he was very much palmed and sold for good money. He said that he had seen him in the mountains of the Rockies, and that he was very much palmed and sold for good money. He said that he had seen him in the mountains of the Rockies, and that he was very much palmed and sold for good money.

Productiveness of Siberia

Greater Wheat Area Than Canada, Argentina and United States.

Col. George H. Emerson, who was sent to Siberia during the war to operate the Trans-Siberian Railway, says that when Siberia, China and Manchuria are developed and connected on a sound basis the foreign trade of the Pacific coast will exceed that passing through American Atlantic ports.

He says: "The wheat-bearing slope of the Trans-Siberian Railway is greater than the total acreage of wheat in the United States, Canada and the Argentine combined. Even during the war, when most of the wheat was taken from the market, the crop of wheat in Siberia, with a population of only 15 millions, produced nearly 400 million bushels of wheat. We have about 100 million bushels of wheat in the United States and England with 100 million people."

Ten thousand carloads of wheat loaded at Harbin more than two years ago, and will have a great moment of this year, because no vessels or railroads were available to carry the wheat to a market. There is practically no market for better, finer, drier, chicer and more other commodities which Siberia produces in quantity."

Taken At His Word.

Rob-Van took some thought to get it done. Where shall we go?

Man is as bad as some other men think he is, or as good as some women think he is.

However strong a gale may be blowing not a breath of wind is felt by the occupants of a balloon.

Oldest Woman Dead

Was the Daughter of a Full-Blooded Indian Chief.

Mrs. Sarah Freeman, said to be the oldest woman in Western Ontario, died at Woodstock recently at the age of 108 years and three months. She was born at Stockbridge, N.Y., during the war of 1812 between Canada and the U.S., the daughter of a full-blooded Indian chief and a mother who was half Indian and African. Her grand uncle was the famous Joseph Brant, in whose honor the city of Brantford was named, and she was related to E. Paul Johnson, the late Indian prince.

Tomatoes Popular.

In certain parts of the United States many tomatoes are used for food that a plan is being worked out to make edible oil and other products from them. The plan is to use the tomatoes in the big liquid plants east of the Mississippi River. In Michigan there are now 225 tomato canning factories. Fifty-seven of these reported during the past season that they were running under contract, 6,400 cases.

Where Automobiles Go.

Two thirds of all the cars sold in 1920 went to areas in agricultural districts. More than half of all the cars went to towns of less than 5,000 people. The great increase in automobile registration has been the south.

Cannouage.

He—Let's kiss and make up. She—You're careful I won't have to.

KANTLEEK

It Can't Leak, Because It's Made in One Piece

EVER been scalded by a leaking hot-water bottle? This can't happen with a Kantleek.

Kantleek Hot Water Bags can't leak. They are "one-piece" water bags—moulded from pure soft rubber into a single piece—no joints or seams. Most hot-water bottles are made in sections and connected. Cement cracks—big leaks!

We guarantee a Kantleek for two years—or a new bag free. Ask to see the Kantleek. You may need it tonight.

MIKE'S SHARE

The time had come to dole out the day's ration and in an Irish register the quartermaster and his assistant were portioning them out in preparation for distribution.

At last, just before the orderly men were due to arrive, the assistant turned to the quartermaster.

"With a twinkle in his eye Mike said: 'Aye ye please now, there's a lot short. Whell I give it to?'"

"Keep it yourself, Mike replied the quartermaster."
